

ANEW Makeover

Our makeover ReZooms

with ReZoom™ eye surgery
which makes Pam's "horrible"
vision crystal clear!

PART 3

By Kristin Erickson

When people see Dr. Michael Shapiro and about, they often ask, "Can I get Lasik surgery?" That's essentially the same question we asked after learning that Anderson & Shapiro Eye Care would be participating in this year's Extremely Special Makeover. Pam, 55, our makeover recipient, had worn glasses since eighth grade and she says her eyesight was "horrible." I've had Lasik surgery myself and loved the results. Would Pam be a candidate?

"My initial thought was, 'Sure she can have it,'" says Dr. Shapiro. But after examin-

ing Pam, he realized she was a much better candidate for ReZoom™ — a new procedure just approved by the FDA in May that is sure to completely change the vision industry.

"Pam is in her fifties and she's extremely far-sighted. She couldn't see anything up close," says Dr. Shapiro. "Lasik would have fixed just part of her problem. She would still have needed glasses to see up close."

A common surgery with a new twist

For years, surgeons have been performing cataract surgery by replacing lenses in

patients' eyes that were becoming cloudy.

Essentially, that same surgery is used with ReZoom, but instead of replacing cloudy lenses, the surgeon replaces a lens that has poor vision with a 6-millimeter round plastic lens

Dr. Shapiro consults with Pam before surgery. Above, during the procedure.

that is comprised of five different "rings" of vision. These rings are precisely customized for each patient's eyes. Almost immediately, an individual's eye trains itself to look through whichever ring is required (imagine the most amazing bi-focal — or in this case, quintuple-focal — in the world).

"We put in a multi-focal lens," explains Shapiro. "This is the newest technology. In
